

Radon and Children's Health Seminar

The U.S. Environmental Protection Agency, Region 4 invites you to attend a short seminar on radon as it relates children's health. Children are often more vulnerable to pollutants than adults due to differences in behavior and biology, that can lead to greater exposure and/or unique windows of susceptibility during development.

You will hear experiences shared by two state programs and their approaches to maintain safe learning environments in daycare and school settings.

January is National Radon Action Month
